o_totalprice	numeric(15,2)	NN
o_orderdate	date	NN
o_orderpriority	character (15)	NN
o_shippriority	Integer	NN

nation

n_nationkey ϕ	Integer	NN
n_name	character (25)	NN
n_regionkey ϕ	Integer	NN

region

r_regionkey ϕ	Integer	NN
r_name	character (25)	NN

List the names and account balances of customers whose account balance is greater than 9000. Order the result by account balance in descending order.

```
1 select c_name, c_acctbal  
2 from customer c  
3 where c_acctbal > 9000  
4 order by c_acctbal desc;
```

Correct

o_orderpriority	character (15)	NN
o_shippriority	Integer	NN

nation

n_nationkey ϕ	Integer	NN
n_name	character (25)	NN
n_regionkey ϕ	Integer	NN

region

r_regionkey ϕ	Integer	NN
r_name	character (25)	NN

For each nation, compute the total number of customers in that nation. Order the result by customer count in descending order.

```
1 with f1 as(  
2 select n_nationkey, n_name, c_custkey  
3 from nation n  
4 join customer c  
5 on c_nationkey = n_nationkey  
6 )  
7 select n_name, count(c_custkey) as cnt  
8 from f1  
9 group by f1_n_name  
10 order by cnt desc;
```

Correct
Evaluation details:

Evaluation:
--Summary of Tests
=> 1 test run / 1 test passed |

Possible solution:
select n_name, count(c_custkey) from nation left join customer on n_nationkey = c_nationkey group by n_name order by count(c_custkey) desc;

Question 5
Correct
Mark 3.00 out of 3.00
Flag question

customer

c_custkey ϕ	Integer	NN
c_name	character varying(25)	NN

r_name	character (25)	NN

For each customer, compute the total value of all their orders. Return customer name and total order value. Order your results by customer name in ascending order.

Hint:

- If a customer has no orders, SUM() returns NULL
- COALESCE(..., 0) converts it to 0

```
1 with f1 as(  
2 select c_custkey, coalesce(sum(o_totalprice), 0) as tot_value  
3 from orders  
4 group by o_custkey  
5 ),  
6 f2 as(  
7 select c_name, f1_tot_value  
8 from customer c  
9 left join f1  
10 on c_custkey = f1_o_custkey  
11 )  
12 select f2_name, coalesce(f2_tot_value, 0) as tot_value
```

Correct

Question 9
Partially correct
Mark 2.00 out of 4.00
Flag question

Write a SQL statement to create a table named "payment" with the following attributes and specifications:

- p_paymentkey**
 - Data type: INTEGER
 - Must be the PRIMARY KEY
 - Cannot be NULL
- p_orderkey**
 - Data type: INTEGER
 - Cannot be NULL
 - Must be a FOREIGN KEY referencing orders(o_orderkey)
- p_amount**
 - Data type: DECIMAL(10,2)
 - Cannot be NULL
 - Must be strictly greater than 0
- p_paymentdate**
 - Data type: DATE
 - Cannot be NULL

Additional requirements:

- All constraints must be declared explicitly.
- Name the foreign key constraint payment_order_key.
- Name the check constraint payment_amount_check.

```
1 create table payment(  
2 p_paymentkey integer primary key not null,  
3 p_orderkey integer not null,  
4 p_amount decimal(10,2) not null check (p_amount > 0),  
5 p_paymentdate date not null,  
6  
7  
8 )  
9 foreign key (p_orderkey) references orders(o_orderkey)
```

Correct

Modify the table to enforce the following constraints:

- The value of **c_phone** must be unique across all customers.
- The value of **c_acctbal** must be greater than or equal to 0.
- Both constraints must be added using ALTER TABLE.
- Name the constraints exactly as follows:
 - customer_phone_unique
 - customer_acctbal_check

Note: Do not recreate the customer table. You can write multiple SQL statements for the above in box below.

```
1
```
